Greater Metro Denver Single Family Detached Active Unit Historic Baseline as compared to 2022

■ Average 2013-2021
■ 2022

DSF

Active inventory for sale is typically at it's highest in the late summer and the lowest inventory in the coldest winter months.

MARKET DYNAMICS ACTIVE BASELINE

Greater Metro Denver Single Family Detached Pending Unit Historic Baseline as compared to 2022

■ Average 2013-2021
■ 2022

DSF

The most units transitioning to the under contract status is typically from March through July.

Greater Metro Denver Single Family Detached Closed Unit Historic Baseline as compared to 2022

■ Average 2013-2021
■ 2022

DSF

Closed transactions follow behind the units being placed under contract by approximately 30-35 days with the heaviest closing months from May to August.

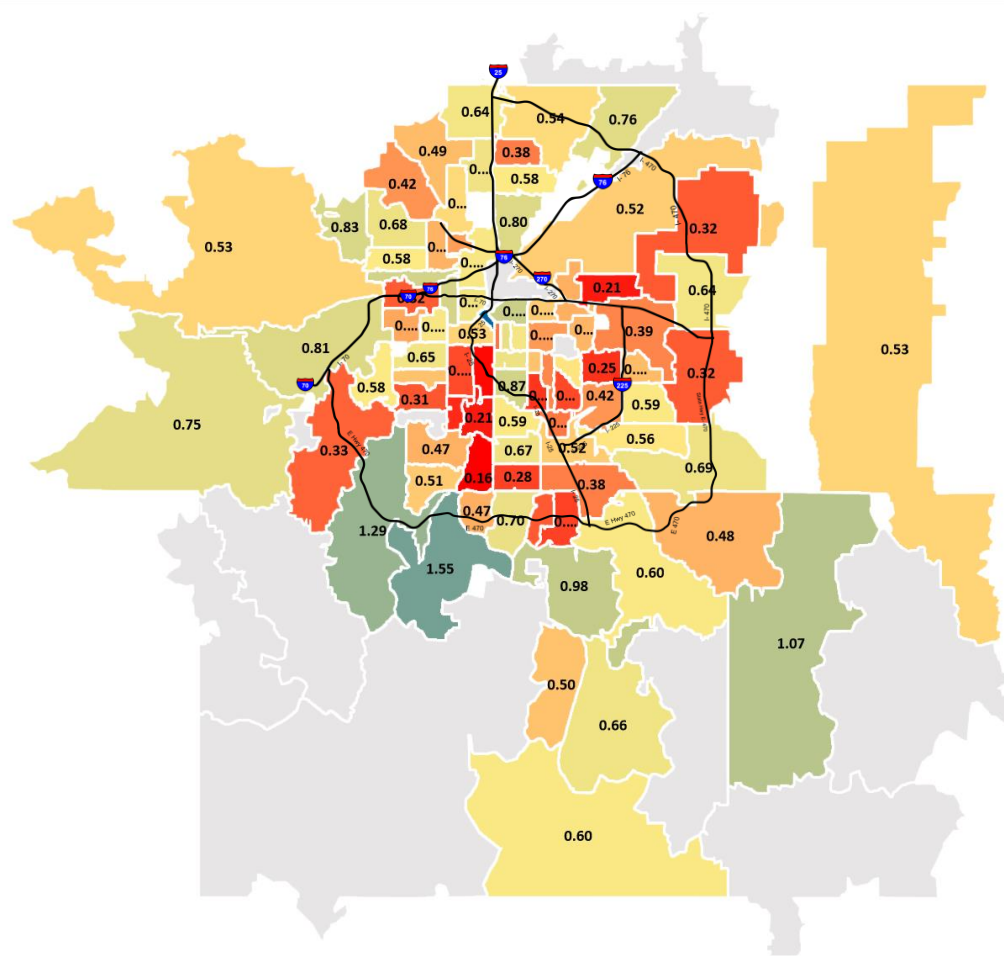

MARKET DYNAMICS CLOSED BASELINE

Greater Metro Denver Single Family Detached Supply in Months by Price Range February 2022

MONTHS OF INVENTORY BY PRICE RANGE

The Metro Denver Real Estate Market continues to be drastically under-supplied of homes at the current rate of demand. A market in balance would be closer to a 6 month supply of inventory. Values below 1.0 month indicate a high likelihood of multiple offers.

2.36

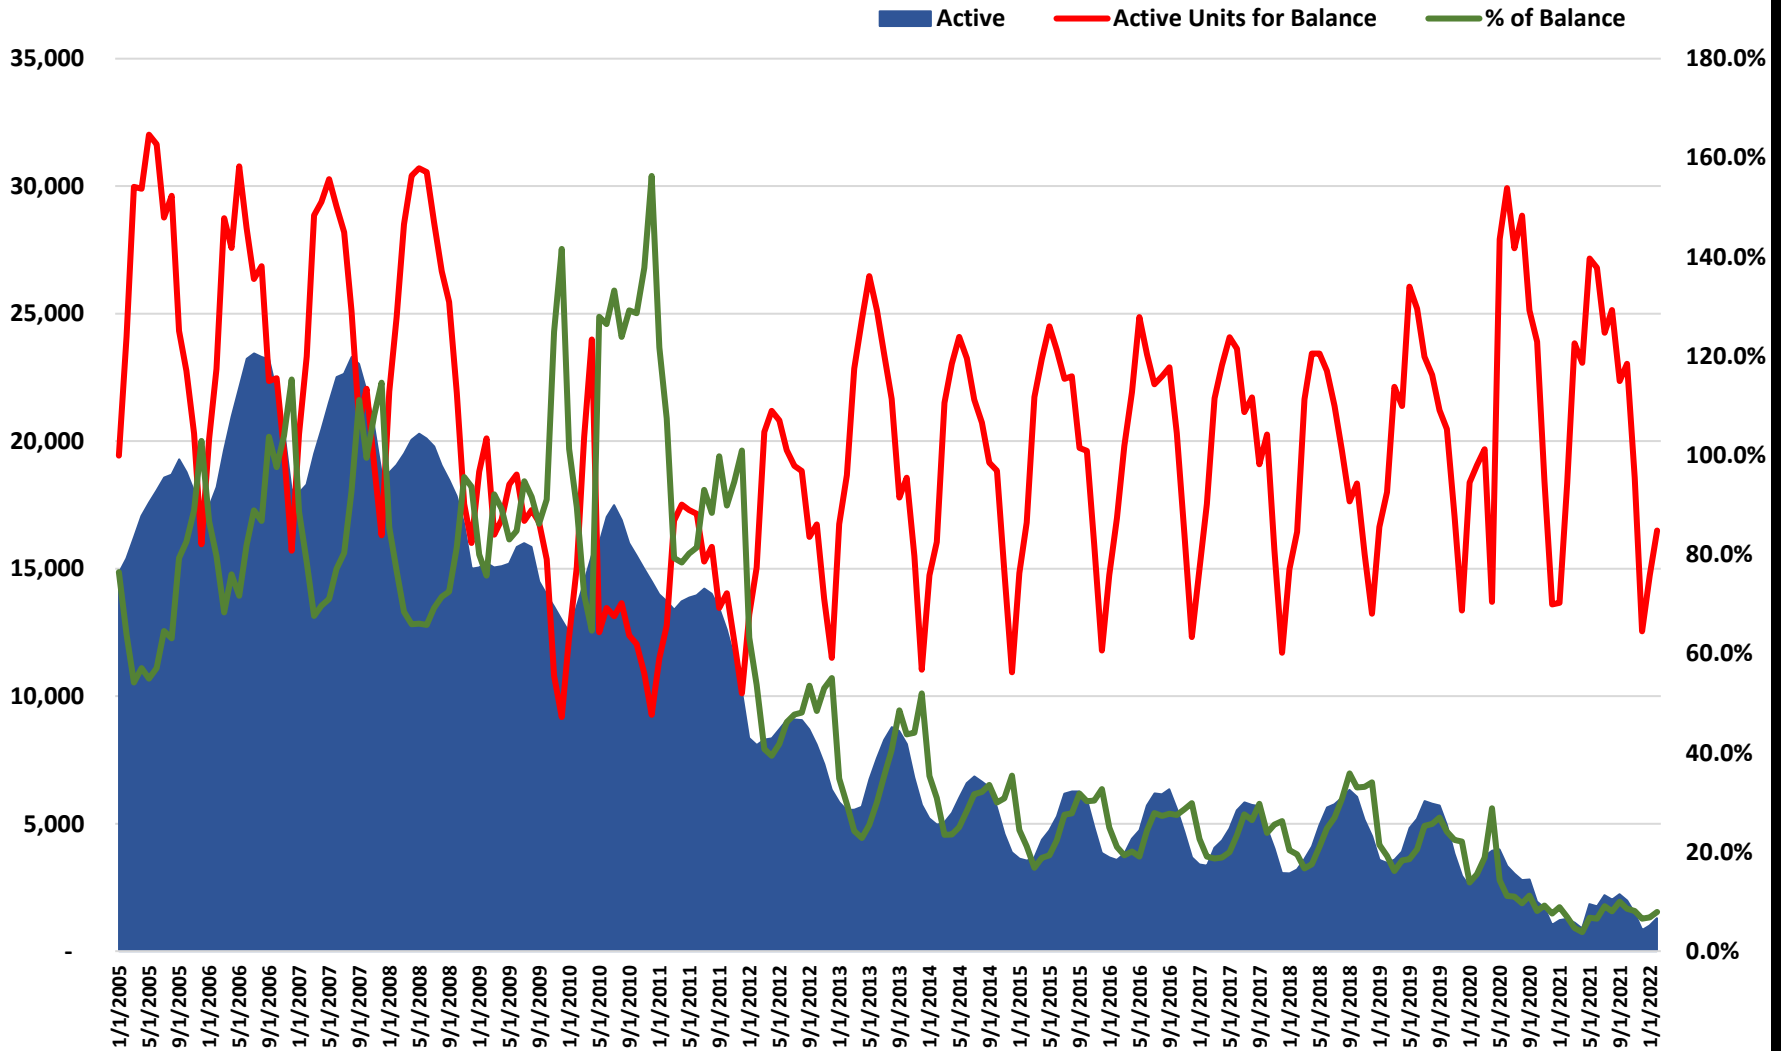

0.57

0.16

The suburban surge and demand for larger homes with more room continues into 2021. More urban densely populated areas are still far from a balanced market but are slightly less competitive than the outer ring suburbs.

Greater Metro Denver Detached Residential Active vs. Balanced Market

% OF BALANCE HISTORIC

Metric	Active	Active for Balance	% of Balance
Current	1,303	16,494	7.9%
MOM	29.3%	11.9%	1.1%
YOY	2.7%	-10.1%	1.0%

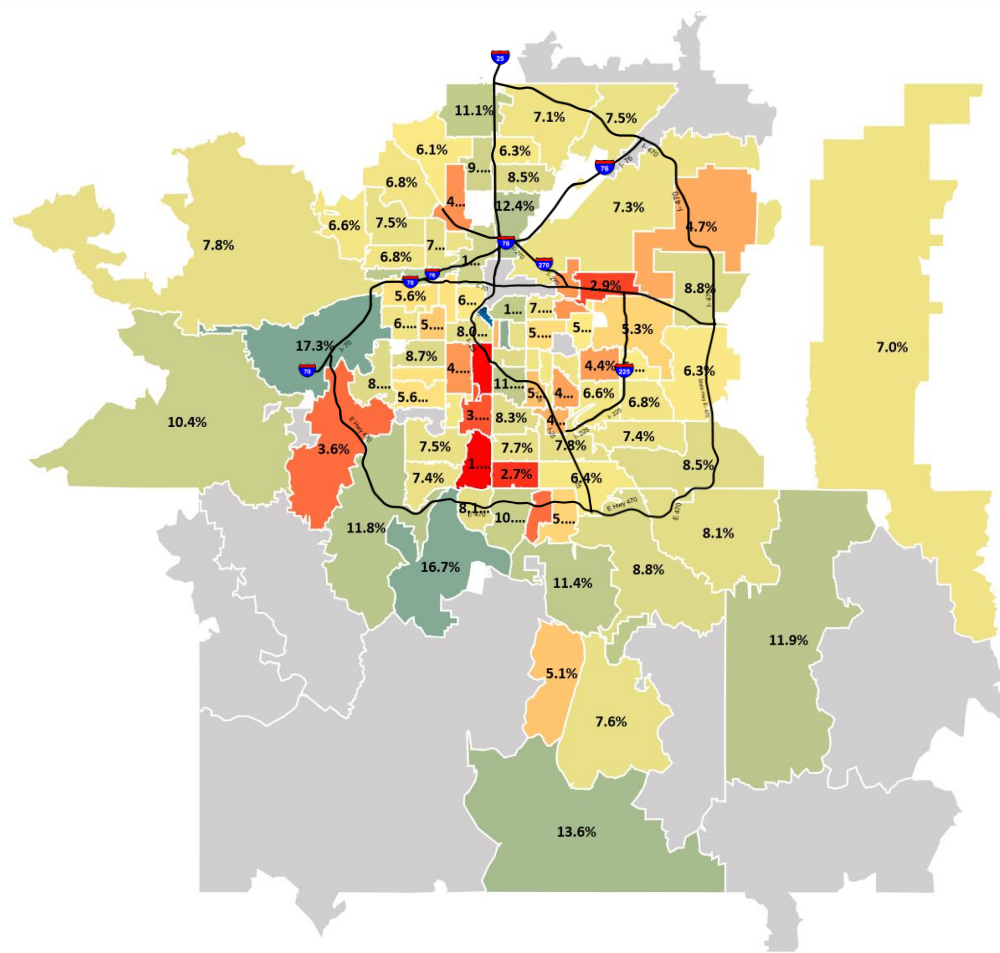

Greater Metro Denver Single Family Detached

Active Unit Count vs. Active Required for Balance by Price Range February 2022

% OF BALANCE BY PRICE RANGE

The Metro Denver Real Estate Market currently has only 8.1% of the homes required to offset demand. The red bar represents how many homes would need to be actively listed to create a 6.0 month supply of homes, or a balanced market.

28.3%

7.7%

1.9%

% OF BALANCE BY ZIP CODE

Zip codes in red are the most undersupplied areas in Metro Denver. At most in LoDo there is still only 57.5% of the amount of inventory to offset demand. A market in balance would display a value of 100%.

Odds of Selling Baseline as compared to 2022

■ Average 2013-2021

■ 2022

DSF

ODDS OF SELLING BASELINE

The Odds of Selling is a ratio of homes for sale in each month, those that went under contract and closed vs those that remained in the market and did not sell. Since this is a direct ratio of the buyers and sellers in a market, the higher this number is the more likely it is that a home will sell. If this number is lower, that means that buyers will have more negotiating power and be less likely to compete against multiple offers.

Greater Metro Denver Single Family Detached Odds of Selling by Price Range February 2022

ODDS OF SELLING BY PRICE RANGE

The Odds of Selling remain incredibly high at all price ranges. This is the comparison of all active units in the market vs. those that go under contract and or close in the same month.

■ 2022

DSF

LIST TO CLOSEPRICE RATIO BASELINE

This is the percent of asking price received by the seller from the closed transaction. If this number is over 100% it means that multiple offers were likely at that time of year. This number is usually highest in the late spring-early summer months as a result of multiple offers due to low supply and more buyer activity.

Greater Metro Denver Single Family Detached Percent of Close to List Ratio Price by Days on Market February 2022

CLOSE TO LIST PRICE RATIO BY PRICE RANGE

Average Close to List Prices this month indicated that multiple offers were to be expected for the bulk of homes under \$2,000,000. Even in super luxury markets offers made by buyers were very strong.

Greater Metro Denver Single Family Detached Percent of Close to Original List Price by Price Range February 2022

CLOSE TO ORIGINAL PRICE RATIO BY PRICE RANGE

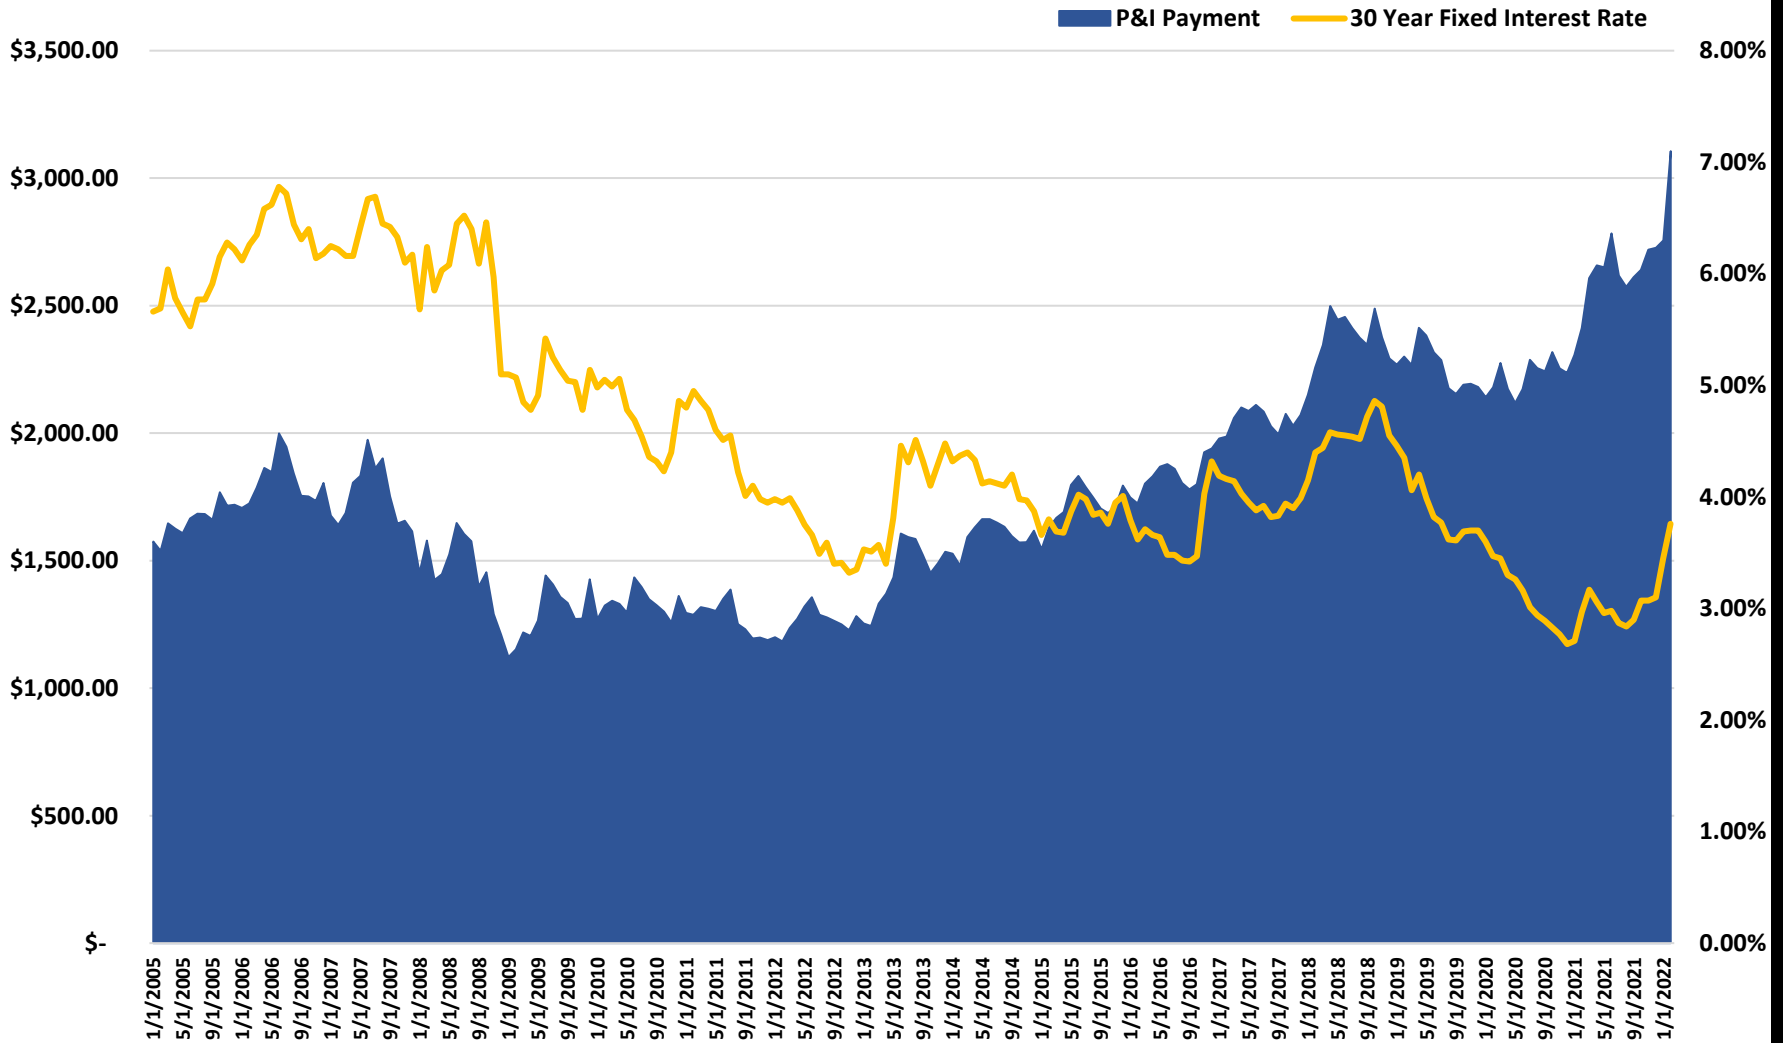

Pricing strategies remain paramount in this market. With only one chance at making a good first impression based on location, condition and price buyers are often unwilling to take a second look even after a price reduction. When homes are priced right the first time they sell faster and for more money.

TERMS, DEFINITIONS AND CALCULATIONS .

*First American Title*TM

Terms, Definitions and Calculations

Target Listing Month	Based upon the sale date of the property, backing out the average time from the date the property is listed until it is placed under contract and the time the property spends from the date it is placed under contract until the closing date. This is used to determine the date that sellers need to list in order to hit their goal closing month.
Target Sold Month	Almost all metrics in this table are based off properties that close, so the data presented in each cell is based off properties that closed in that month.
Active Count	This is the number of units currently for sale in the 7 Metro County Region on a specific date, the 4th of each month. Essentially, if a buyer were to go out and see every property for sale on a given date this is how many homes they would have to choose from. Sellers have a larger advantage when lower counts of homes are for sale, when supply is short buyers are more likely to have to compete against each other which drives prices up.
Pending Count	This is the number of total units placed under contract where a buyer and seller mutually agree to terms of a negotiated contract. When this count is higher it is more favorable for sellers, the larger the potential pool of buyers the more likely a home is to sell.
Closed Count	This is the number of total units closed, or successful transactions resulting from a buyer and seller mutually agreeing and fully executing the terms of a real estate contract. Same as under contract, sellers have a larger advantage when this count is higher to sell their house.
Expired Count	Expired Count represents homes where the listing contract has past it's expiration date and are no longer marketed for sale. If the expired count rises this is unfavorable for the seller as fewer homes are receiving offers and allows for the buyer to have more negotiating power. If this number is low, more homes are selling which favors the seller.
Odds of Selling	The Odds of Selling is a ratio of homes for sale in each month, those that went under contract and closed vs those that remained in the market and did not sell in that same month. Since this is a direct ratio of the buyers and sellers in a market, the higher this number is the more likely it is that a home will sell, which is advantageous to the seller. If this number is lower, that means that buyers will have more negotiating power and be less likely to compete against multiple offers.
% of Close/List	The percent of asking price received by the seller from the closed transaction. If this number is over 100% it means that multiple offers are likely at this time of year, due to lower listing counts and more buyers writing contracts. This number is typically highest in the late spring-early summer months as a result of multiple offers due to low supply and more buyer activity.
Avg DOM	Average Days on Market is the average length of time it takes from the date the property is listed until the property receives a contract for purchase from a buyer. Shorter days on market favor the seller, while longer days on market favor the buyer. If homes are selling very quickly this is also an indication of more buyer activity- days on market are at their shortest for homes closing in April, May and June- as a result of homes being listed in March, April and May.
Med DOM	Median Days on Market is the time measured in days at which point 50% of the properties for sale have gone under contract. Same as above- but using median days on market rather than average.
% U/C 7 Days or Less	The percentage of units in that month that went under contract within one week of being listed. Again, the faster homes sell, the larger and more competitive the pool of potential buyers is for properties in Denver. The fastest months are represented by those homes listed in March, April and May.
% of Reduced Listings	The percentage of all closed transactions that experienced one or more price reductions from the Original List Date until the date the property is placed under contract. This metric only tracks the amount the price had been reduced and not any additional negotiations once a contract has been offered or accepted.
Average Price Reduction	The average price reduction, or difference between the original list price and the last asking price when a property is placed under contract expressed as a % of the Original List Price. This price does not reflect how many price reductions but rather the entire amount reduced regardless if it was in one or multiple price reductions.
Months of Inventory	The Months of Inventory is how long it would take to sell out of the existing inventory for sale at the current rate of sales (Active/Sold). A 6-month supply of homes is a market in equilibrium where buyer and seller are on an even playing field, and typically represents when appreciation matches the rate of inflation. Denver has averaged about 4-4.5 of inventory over the last 15 years. The lower this number is the more it favors the seller.
% Change Avg Sold Price MOM	This is the percent change in average sales price from the previous month. Price is a function of the relationship between supply and demand. If supply or homes being listed is low or going down (like in late winter and early spring) and demand is rising, early buyer activity prices rise. The shortest supply is in the months of January, February, March and April, buyers begin to search for their home early in the year, so demand is rising. If supply is down and demand is up prices rise due to multiple offers on homes.
% Change Med Sold Price MOM	This is the percent change in median sales price from the previous month. Same statement as above, just using median price as the variable.
% Distressed Sales	This is the overall percent of distressed properties that closed, including short sales, HUD or government sales and foreclosures. When the level of distressed homes is higher, sellers are in a position to sell homes at lower prices than the value of the current loan on the house- selling for a loss. This is an indicator if a market is declining. With close to zero percent anticipated distressed sales sellers have equity in their homes so when they sell, they are profitable.
